

Design Overview for <<101734216_TicTacToe >>

Name: **Lakshmi Saketh Chebrolu**

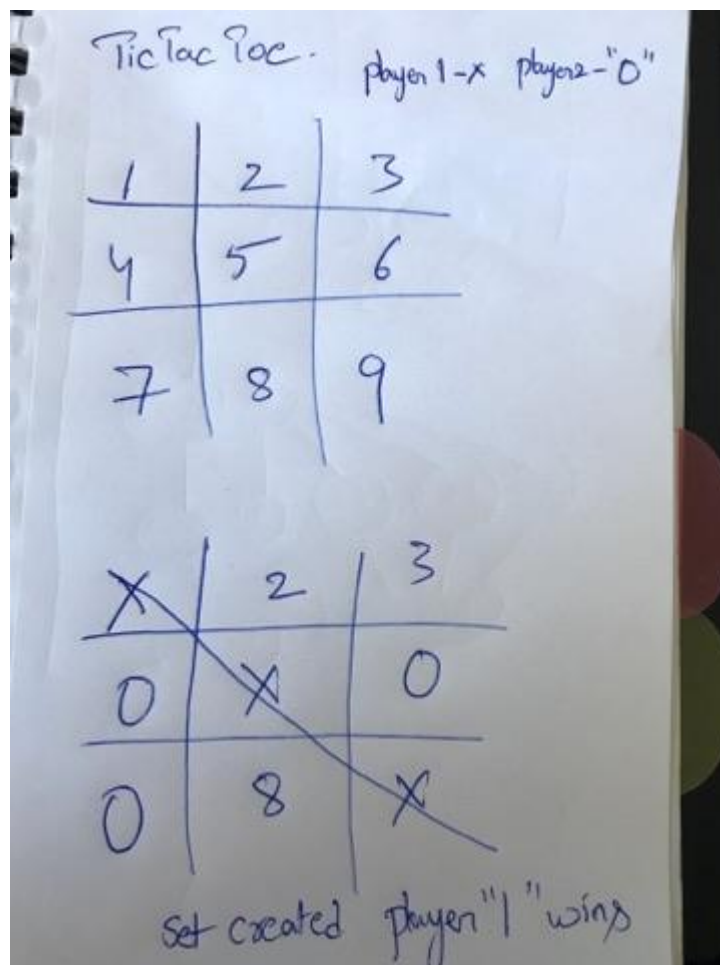

Student ID: **101734216**

Summary of Program

Describe what you want the program to do... one or two paragraphs.

This is a tic tac toe game. In these two players are required one player will choose one symbol and other will choose another symbol. In this we have a nine-block array in which two players can fill it with the selected symbols and the player who fills the array with the selected symbols in a sequence is the winner. Here the sequence indicates straight row or cross

Include a sketch of sample output to illustrate your idea.

Overview of Program Structure

List the main functions/procedures you are going to need to create this program. For each function/procedure provide its name and a brief description of what it will do.

DrawGame();

This is a procedure in which the user will design the required things that he is needed to display the things on the screen.

Verifyset():integer;

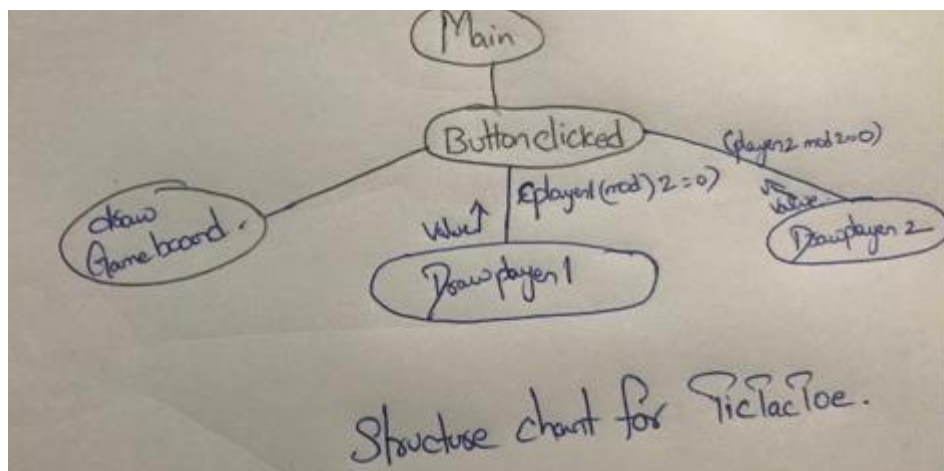

Through this function the player inputs are verified with the given inputs every time and if it is matched with the set then it will return status flag.

ReadInput(position:Integer);

Through we will read the position based on the user and draw the appropriate image in the position selected by the user

DisplayWinner(Displayplayer:player);

Through this the user details will be displayed based on the set who completed first and he is the winner of the game.

Output:

Welcome to TicTacToe

Sweta Won
